

Our
commitment.
Your peace
of mind.

What's your **next** move?®

Smart motorists never take their eyes off the road for more than a couple of seconds.

Constantly scanning, eyes moving, they engage their minds and intellect to ensure a safe journey.

At J.B. Hunt, safety is our number one focus. Like an attentive driver, we use every resource to accomplish our duty: **five decades of best practices, proven processes and technology, compliance with government regulations, and ongoing research and analysis.**

We are experts at developing processes and environments that foster safe and secure operations. We instill in our people a mindset that safety is always the appropriate personal choice.

As one of the nation's largest freight transporters, we know every safe choice we make provides the opportunity to demonstrate our values.

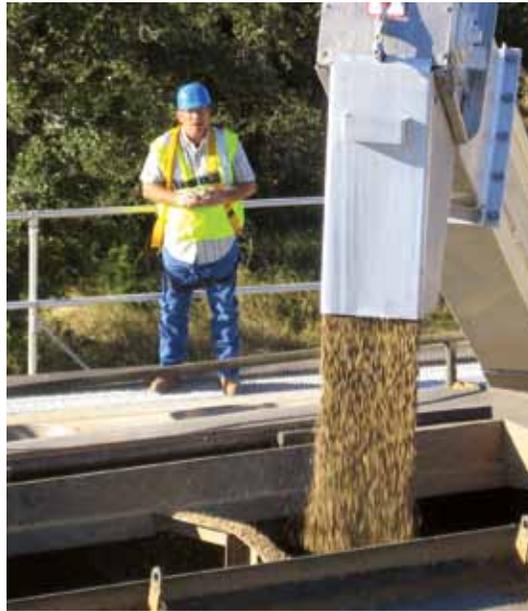

Commitment

The most effective way to get the job done is to do it safely. J.B. Hunt's long-term commitment to this ideology is revealed in our quality drivers, extensive driver training programs, detailed and thorough safety analysis of all activities, as well as a pervasive safety culture.

Assessment

We evaluate potential hazards and develop risk control methods. Proper equipment, ramps, dollies, rollers, harnesses and forklifts are deployed with appropriate training methods. Activities are reviewed for proper personal protective gear such as steel-toe shoes, hard hats, or reflective vests.

Job Safety Analysis (JSA)

J.B. Hunt has developed a proprietary process for detailing steps and sequences for common activities, reducing the risk of personal injury and product damage. More than 55 JSAs have been created for standard and custom operations. New methods are continually developed to standardize activities and improve risk control.

Standardized Training

After an intensive hiring process, all drivers receive Smith System® training, followed by required monthly briefings and quarterly updated training.

Job Specific Training

Prior to working in a new role, drivers engage in hands-on practice sessions using real equipment. Pre-placement, functional assessments ensure drivers meet a job's physical requirements.

Expertise

Our transportation safety professionals impart years of experience, bringing value to customers in the form of broad counsel. J.B. Hunt provides periodic, comprehensive on-site safety audits; collaboration for compliance reviews with the Department of Transportation; recommendations on OSHA compliance and safe work practices; problem analysis; and product packing and loading consultation.

Safe Technology

Contemporary technology gives J.B. Hunt an edge in safety. On-board computers supply turn-by-turn directions and instant notification and tracking of critical events. Bendix® Wingman®, a system that actively assists drivers with maintaining a safe following distance, is installed in about one-third of our trucks and will eventually be standard equipment throughout the fleet. Driver files are electronically audited to ensure compliance with hours-of-service regulations and proper driving techniques.

Security

Incorporating the latest security practices and technologies is critical to reducing the potential for cargo theft. State-of-the-art locking devices, trailer tracking, satellite-control systems, driver caravans, and intense driver screening make J.B. Hunt an industry leader in load securement.
